PROFILE

Product manager who rose from associate PM to Head of Product over five years, owning the full lifecycle across web and mobile products from discovery to launch to revenue while working directly in SQL, REST APIs, and analytics alongside engineering teams. Skilled at translating customer pain points into scalable platform solutions in ambiguous, fast moving environments.

EXPERIENCE

Kabba Transport

Remote

Early stage mass transit SaaS that connects and coordinates riders, drivers, and operators in real time.

Head of Product

Nov 2025 - Present

- Reprioritized the roadmap around trip completion rate, shipping the reliability and driver matching work that cut cancellations and drove the platform past 1M completed trips.
- Manage a team of engineers and contractors, owning hiring, sprint planning, and the quality bar that keeps the rider, driver, and operator apps shipping on a weekly cadence.
- Present the product roadmap and results directly to the executive team, building consensus across engineering, operations, and finance on where to invest next.
- Championed an ERP and government portal integration program that cut manual reconciliation across the operator base by 80%, removing the biggest drag on operator time.

Senior Product Manager

Apr 2023 - Nov 2025

- Led product across the rider, driver, and operator apps on web and mobile, scaling the platform to 100+ of the biggest companies in Ethiopia.
- Ran discovery with 100+ operators, drivers, and riders and partnered with a 10 engineer team to take the roadmap from spec through QA and launch.
- Built a SQL backed analytics layer and wrote queries directly to surface the operational metrics that drove pricing, routing, and staffing decisions.
- Launched a configurable B2B corporate tier that grew into a core revenue line, holding client retention at 95% year over year.

Product Manager

Feb 2022 - Apr 2023

- Owned the driver and operator apps end to end, running discovery, writing PRDs, A/B testing changes before rollout, and shipping on a weekly release cadence.
- Introduced RICE prioritization to sequence the roadmap and built the discipline to cut work that did not move retention or operational performance.
- Shipped the first payment provider integration, removing a top source of operator support tickets and a chunk of manual reconciliation work.

Associate Product Manager

May 2021 - Feb 2022

- Supported senior product and the founding team through the first release, coordinating early operator and rider interviews and helping turn findings into product requirements.
- Wrote user stories and acceptance criteria for the first rider and driver features, working alongside engineers to clarify scope and edge cases.
- Set up early usage tracking and reported weekly adoption numbers to inform what the team built next.

Software Engineer Intern

2019 - 2021

Wings Transportation

Minneapolis, MN

Regional transportation company running a fleet of around 200 drivers. Completed two internships here early in my career.

- Built internal routing and dispatch software for a 200 driver fleet, cutting manual scheduling work by 40% and getting daily routes out 30% faster.

- Added driver availability and route status tracking, cutting the back and forth calls between dispatchers and drivers by 50%.

PROJECTS

LinQ, Student Transportation Management Platform

Routing · GPS Tracking · Dispatch · Parent Mobile App (iOS & Android)

- Built LinQ on my own time to solve a gap I kept seeing in student transportation, a platform for type 3 (seven seater) fleet operators now used by 10+ companies to route 10,000+ students across Minnesota and North Carolina.
- Shipped the routing and dispatch tools, a driver app for district contracted operators, and a parent app for real time student tracking, bringing visibility to a segment the big bus software had ignored.

SKILLS

Product	Product strategy and vision, roadmapping, 0 to 1 product development, discovery and user research, PRDs and user stories, prioritization (RICE), go to market and launch
Analytics	A/B testing and experimentation, product analytics, KPIs and north star metrics, data driven decision making
Leadership	Cross-functional leadership, stakeholder and executive communication, team and vendor management, agile delivery
Technical	SQL, Python, REST APIs and integrations, GPS and location data, mobile and web products
Domain	Mass transit and mobility, student transportation, fleet management, logistics and operations, payments

EDUCATION

Metro State University

St. Paul, MN

Bachelor of Science in Computer Science

Dean's List. Coursework: Systems Design, Data Structures, Advanced Programming, Operating Systems.

LEADERSHIP & RECOGNITION

Head of AI Club, Metro State University. Founded and lead a student organization focused on applied AI, organizing workshops and speaker sessions for fellow students.

Kabba Transport, Africa Startup of the Year Nominee. Contributed product across the platform recognized for its work in transportation and urban mobility.

Management Leadership for Tomorrow (MLT) Fellow. Selected for a nationally competitive program for high potential leaders in business and technology.
